Light Filtering

Mesa Light Filtering is a PVC free closed weave fabric that allows light into the space while still maintaining privacy. All 5 neutral colors match perfectly to their corresponding blackout.

Blackout

Use Mesa Blackout when looking for total light blockage, insulation, and superior performance. This PVC free fabric comes in 14 modern colors with a uniform white back. Its soft matte face provides an elevated aesthetic on any window.

Façade Blackout

Ideal for open roll shades

Mesa Façade blackout is a charcoal gray backed fabric designed to help shades disappear in the window from outside looking in. This façade blending technique helps to maintain the intended exterior aesthetic of the building design.

The dark faced colors combined with the charcoal gray back create an ideal appearance for open roll systems.
